

You wouldn't manage public health
with outdated knowledge...
health authorities are,

by refusing to adapt SARS-CoV-2 prevention

COVID is transmitted
through **AIR**
and **IGNORANCE**

The COVID virus, SARS-CoV-2, is transmitted through viral particles lingering in the air. Ventilation, HEPA filtration, UVC disinfection and the use of respiratory masks are effective ways to prevent it. No public awareness campaign in France has yet sufficiently raised awareness of this mode of transmission. Yet, this is essential in order to avoid acute COVID, as well as the delayed consequences of the virus (particularly long COVID).

IGNORANCE is not
a public health policy
